***Allowable Subject Matter***

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior arts fails to teach a keyboard structured to be incorporated into an electronic device, the keyboard comprising: a printed circuit board having a plurality of electrical contacts; a primary conductor portion including a number of primary conductors, each one of said primary conductors being elastically deflectable between a relaxed position and a deflected position, each one of said primary conductors in the deflected position electrically connecting together a pair of the electrical contacts; a secondary conductor portion including a number of secondary conductors, each one of said secondary conductors being elastically deflectable between a relaxed position and a deflected position, each one of said secondary conductors in the deflected position electrically connecting together a pair of the electrical contacts; a number of keys, each one of said keys being cooperable with a corresponding one of said primary conductors and at least a first corresponding one of said secondary conductors; the primary conductors and the secondary conductors being disposed between the printed circuit board and the keys; and each one of said keys being movable between an initial position, a first terminal position, and a second terminal position, said each one of said keys in the first terminal position deflecting the corresponding one of said primary conductors to its deflected position, said each one of said keys in the second terminal position deflecting the corresponding one of said primary conductors and said at least a

**first corresponding one of said secondary conductors to their deflected positions as claimed in Claim 1.**

The prior arts fails to teach a handheld electronic device comprising: a keyboard; a display positioned adjacent the keyboard; a processor structured to receive inputs from the keyboard and to output to the display as a function of said inputs; the keyboard including a printed circuit board, a primary conductor portion, a secondary conductor portion, and a number of keys; the printed circuit board having a plurality of electrical contacts; the primary conductor portion including a number of primary conductors, each one of said primary conductors being elastically deflectable between a relaxed position and a deflected position, each one of said primary conductors in the deflected position electrically connecting together a pair of the electrical contacts; the secondary conductor portion including a number of secondary conductors, each one of **said secondary conductors being elastically deflectable between a relaxed position and a deflected position, each one of said secondary conductors in the deflected position electrically connecting together a pair of the electrical contacts; each one of said keys being cooperable with a corresponding one of said primary conductors and at least a first corresponding one of said secondary conductors; the primary conductors and the secondary conductors being disposed between the printed circuit board and the keys; and each one of said keys being movable between an initial position, a first terminal position, and a second terminal position, said each one of said keys in the first terminal position**
